

# National Argon Map: an AuScope Initiative

## $^{40}\text{Ar}/^{39}\text{Ar}$ Geochronology Laboratory Sample Submission Form

This form must be completed and returned to Marnie Forster ([Marnie.Forster@anu.edu.au](mailto:Marnie.Forster@anu.edu.au)) before any work can be commenced in the Argon Laboratories.

### Dating Objective

**What is the geological question  $^{40}\text{Ar}/^{39}\text{Ar}$  analysis will address?**

Updating legacy ages  $^{40}\text{K}/^{40}\text{Ar}$  ages with  $^{40}\text{Ar}/^{39}\text{Ar}$  ages, and comparing Rb-Sr ages with updated Ar ages to assess Ar loss. We hope to see if assess if the magmatic event was longer lived or to confirm it was a short lived event with preferred Ar ages.

**What type of age(s) are expected? (e.g. magmatic crystallisation, metamorphism, fluid alteration/mineralisation, cooling, shearing etc):**

Magmatic crystallisation

**Mineral target(s) for dating:**

Leucite groundmass

**Estimated  $^{40}\text{Ar}/^{39}\text{Ar}$  age (e.g. Cenozoic, Mesozoic, Paleozoic, Proterozoic, Archean – provide estimated numerical age range if possible):**

Miocene (Cohen *et al.* 2008)

### Sample Information

**Location description (e.g. a sample of x was collected from y, z km from abc town):**

Taken from a quarry wall, at the co-ordinates given above, which provided the most unweathered sample available in the quarry.

**Lithological characteristics (rock description):**

Aphanitic mafic rock with a blue hue.

**Relative age constraints (pertinent geological relationships with surrounding rock units and any previous geochronology):**

n/a

**Thin section description (if available):**

n/a

**Photograph(s) e.g. field site, hand-specimen, photomicrograph:**

n/a
